PROFESSIONAL SUMMARY

Information Technology undergraduate (CGPA 8.08) who builds full-stack and database-driven applications using Python, Flask, and the MERN stack. Completed three internship projects in cloud-based systems, database security, and data integrity, and shipped projects with authentication, REST APIs, and Google Maps integration. Currently in third year of B.Tech, seeking a software development internship to apply strong problem-solving and web development skills.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL
Frontend: HTML, CSS, React, Vite
Backend & APIs: Node.js, Express.js, Flask, FastAPI, REST APIs
Databases: MySQL, MongoDB (Atlas, Mongoose)
Security & Cloud: JWT Authentication, SQL Injection Prevention, Cloud-based Application Development
Tools: Git, GitHub, VS Code, Streamlit
Fundamentals: Data Structures & Algorithms, DBMS

PROJECTS

Employee Leave Management System (ELMS)
React, Vite, Node.js, Express.js, MongoDB Atlas, Mongoose, REST APIs, JWT

- Built a full-stack leave management system with a React/Vite frontend and a Node.js/Express.js backend, storing data in MongoDB Atlas via Mongoose.
- Developed REST APIs for authentication, employee data, leave applications, and manager approvals/rejections, secured with JWT across employee, manager, and admin roles.
- Implemented admin employee–manager assignment and a notification module to keep users updated on leave status.

RideShare Connect
Python, Flask, MySQL, Google Maps APIs

- Developed a carpool platform where drivers post rides and passengers search, match, and book seats.
- Implemented route-overlap matching with Google Maps APIs, plus seat management, fare calculation, and wallet-based transactions.
- Built secure user authentication and complete ride and booking workflows.

INTERNSHIP EXPERIENCE

Internship Projects

- Cloud Bus Pass System (Python, MySQL): developed a cloud-based bus pass management system covering user registration, pass generation, verification, and record management.
- SQL Injection Protection (Python, MySQL, Cryptography library): built a security application that detects and prevents SQL injection using input validation and secure query handling.
- Data Redundancy Removal System (Python, MySQL): built a tool that identifies and removes duplicate records, improving database consistency and storage efficiency.

EDUCATION

B.Tech in Information Technology (Pursuing, 3rd Year) — CGPA: 8.08 *Expected 2028*
Anil Neerukonda Institute of Technology & Sciences (ANITS)

Intermediate (12th Grade) — Ascent Junior College *89.0%*

Secondary Education (10th Grade) — Narayana High School *70.8%*

CERTIFICATIONS & ACHIEVEMENTS

- Completed Cloud Computing Project — CodeAlpha
- IBM Case Study Prototype: Banking Credit Default Risk & Cross-Sell Engine
- LeetCode: completed the SQL 50 Study Plan
- Participant, AI-Based Farmer Query Support & Advisory System Hackathon

Languages Known: English, Telugu
